A Tale of Two Computers

A Tale of Two Computers

A Tale of More Computers

A Tale of More Computers

A Tale of More Computers

A Tale of More Computers

It gets exponentially harder to scale

$$\text{Connections} = \frac{N \times (N-1)}{2}$$

Cable and Network interface costs. . .

General chaos... Not good.

A Switch Comes to Town - Data Link

Like a post office

We need addresses

MAC F4:93:7F:E8:58:E3

When Two Networks Collide - Internet Protocol

When Two Networks Collide - Internet Protocol

IP Addressing

IP address

Prefix: A Network

Suffix: A Node

144.122.98. 32

Why do we need IP addresses?

VPN and Geolocation

Each Computer Can Do So Many Wonderful Things!

Envelopes within envelopes...

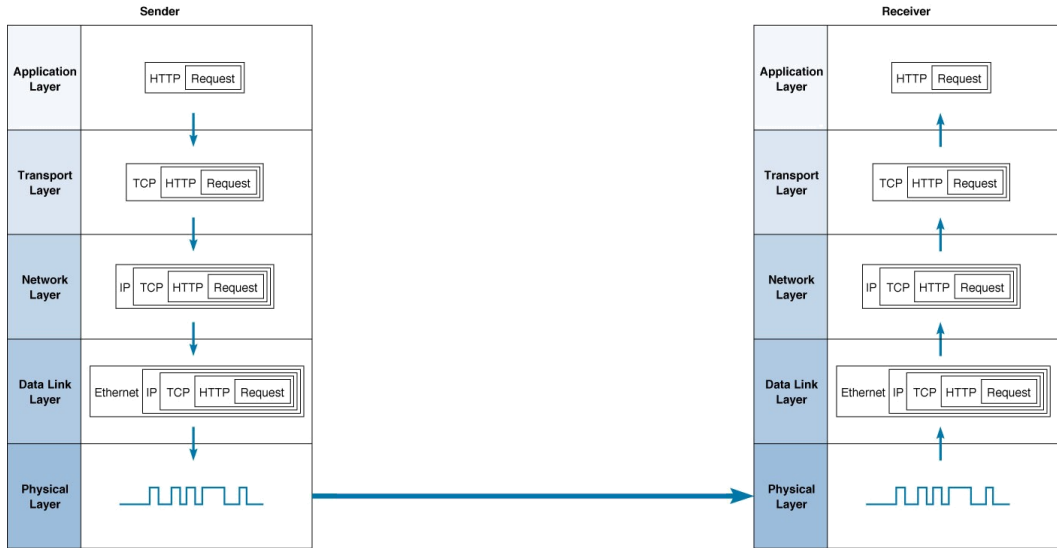

Envelopes within envelopes...

Address Resolution

Why envelopes within envelopes...

Why bother with layers? What is the advantage?
