# Lesson Plan

Irfan Kanat

2022-02-21

In this module we will learn about the computer networks. We recommend you take two sessions to cover the content of this module. One session to cover protocol stack and addressing and another to cover the routing.

Learning Objectives:

What are the different types of addresses used in modern computer networks? Why do we need different types of addresses? How does routing work? What are the security implications of the way computer networks operate?

Included in this module are:

- Protocol Stack and Addressing: Videos and lecture slides.
- Wireshark Activity: Tutorial for protocol stack and addressing activity.
- Routing: Videos and lecture slides.
- Routing Exercises: Slide deck for in class exercises for routing activity.
